

City-SUITE

The universal platform for the world of security and traffic management

Security and Access Control • Logistics and Industry • **Transport and Communications Infrastructure**

The universal platform for the world of security and traffic management

Scalable, accessible, intelligent, cloud or private: the v-SUITE platform offers a complete range of vertical applications dedicated to security and traffic management professionals, business and consumer software. A solution capable of allowing industry partners to better manage and control their products and provide innovative services to their customers.

The advantages of using a Suite instead of a single program

city-SUITE is an effective and reliable tool in security and traffic management but also a sharing tool, a unique environment where traffic information can become useful for an anti-intrusion system, where diagnostic data can become an indicator security and where all the information generated can be consulted and analyzed together in order to make operational decisions.

Main features

- Manage all the safety and traffic control equipment
- installed in the area in a single interface. Supervise your security systems.
- Supervise its customers' systems to offer new services control, management or maintenance.
- Centralize remote control (including CCTV) of video systems
- its customers to increase the quality of service.
- Web-cloud platform immediately available and interoperable for FF.OO. and for all operators accredited for integrated safety management (Minniti Decree). Possibility of offering data and images to any superordinate provincial, regional, national platforms (total scalability).

Framework and administration console

Analytics

Software application that allows you to analyze the data coming from the various systems connected to the v-SUITE, both safety and traffic. The data is presented in graphic, tabular form and in various formats that can also be exported to third-party applications. The service is mainly aimed at those who have to make strategic decisions and therefore need to have a clear and detailed vision of operational scenarios.

Diagnostic

Your diagnostic panel to supervise the operating status of the installed fleet. The v-Diagnostics service allows you to be constantly informed about the correct functioning of the devices and intervene promptly in the event of technical unexpected events.

Automation

The software that allows the creation of automatic processes when pre-established events occur. A graphical editor that allows you to draw a flowchart relating events and actions.

City-SUITE

The universal platform for the world of security and traffic management

Security and Access Control • Logistics and Industry • **Transport and Communications Infrastructure**

This is how we accelerate your city

Certainty of scalability

A robust and consolidated structure over time that allows you to manage very large systems.

Endless possibilities

Starting from a suite of applications for security, traffic and IoT with a technological partner always at your side.

No worries

In the integration of a multitude of field devices thanks to our multi-protocol distributed intelligence.

A complete platform of applications and tools to control and analyze your security and traffic systems

A complete range of applications dedicated to Security and Traffic Management professionals, business and consumer software to allow industry partners to better manage and control their products and provide new services to their customers.

Security management and access control

Xentinel

Traffic management and road safety

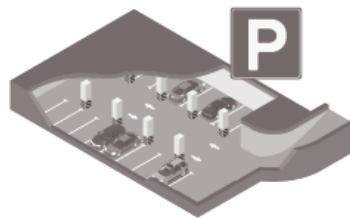

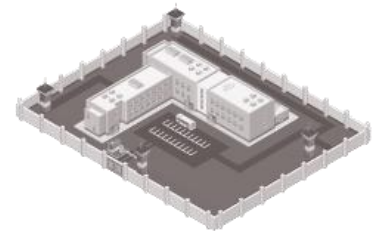

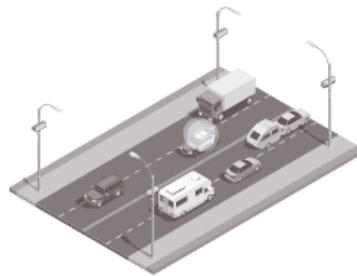

ITS Manager, Xscanner, Tolling manager

Parking management and vehicle access control

Logipark, Logiweight

B2B services

Multimanager, Xentinel Operation Center
